KHUSH MEHTA

New York Metropolitan Area | kmehta20@stevens.edu | 929-250-4316 | LinkedIn | GitHub

Education

Stevens Institute of Technology **Sept 2025 – May 2027**
Master of Science, Computer Science: GPA 4.0/4.0 ***Hoboken, NJ, United States***
Relevant Coursework: Generative AI, Machine Learning, Deep Learning, Big Data, Data Mining

Indus University **Jul 2021 – May 2025**
Bachelor of Technology, Information Technology: GPA 3.8/4.0 ***Ahmedabad, India***
Relevant Coursework: Data Structures, Artificial Intelligence, Big Data, Web Development

SKILLS

Languages: Python, SQL, MySQL, R, JavaScript, Node.js, Java, C++, C
Frameworks: Flask, Django, FastAPI, Streamlit, Bootstrap
Developer Tools: Git, GitHub, Docker, AWS, Google Cloud Platform (GCP), Jupyter, Kafka, Snowflake, BigQuery
Libraries: TensorFlow, PyTorch, Keras, Scikit-learn, NumPy, Pandas, OpenCV, Matplotlib, Seaborn, Power BI, Tableau

WORK EXPERIENCE

Chatbot Developer **May 2025 – Jul 2025**
Code Schema Inc. ***Ahmedabad, India***

- Developed AI-powered chatbot using OpenAI APIs and NLP techniques to address student queries, processing 200+ daily inquiries and reducing manual support intervention by 35%
- Implemented sentiment analysis using TextBlob to detect user frustration levels and adjust response tone, improving customer satisfaction scores by 34%
- Collaborated with UX designers and content teams to deploy AI-driven training portal, streamlining onboarding process for 500+ new users

AI/ML Intern **Dec 2023 – Apr 2024**
ExtendedITArms Solutions Pvt Ltd ***Ahmedabad, India***

- Engineered advanced feature extraction pipelines and conducted hyperparameter tuning using GridSearchCV for client ML models, improving predictive accuracy from 78% to 93%
- Refactored machine learning inference pipelines by implementing batch processing and model optimization techniques, reducing latency by 20% for real-time applications
- Redesigned data preprocessing workflow by creating automated feature engineering scripts, decreasing model training time from 4 hours to 3 hours while maintaining 92% accuracy

Machine Learning Internship **May 2023 – Jun 2023**
Prodigy InfoTech ***Mumbai, India***

- Built and fine-tuned classification models (Random Forest, XGBoost, Neural Networks) on customer datasets of 10K+ samples, achieving 95% accuracy through systematic feature selection and cross-validation
- Optimized data preprocessing pipeline by implementing efficient encoding and scaling techniques, reducing training time by 25% without compromising model performance
- Created automated model evaluation framework using Python to compare 5+ algorithms across accuracy, precision, and recall metrics, accelerating model selection process by 30%

PROJECTS

QODBC Chatbot **May 2025 – Jul 2025**

- Engineered AI-powered support chatbot leveraging Mistral-7B LLM and retrieval-augmented generation (RAG) architecture with Pinecone vector database, reducing average query resolution time by 40% and increasing customer satisfaction by 30%
- Developed automated document processing pipeline with web crawling, NLP-based chunking, and sentiment analysis to create dynamic knowledge base, achieving 25% improvement in response accuracy through continuous learning from user feedback

Insider Trading Signal Classifier **Nov 2025 – Feb 2026**

- Engineered machine learning pipeline to predict stock price movements from SEC insider trading data, processing 400K+ transactions across 5,000 securities with 63-day forward return labels
- Architected scalable ETL workflow extracting Form 4 filings and orchestrating Yahoo Finance API calls to compute market-adjusted forward returns across multi-year datasets
- Overcame 16GB memory constraints through quarterly partitioning strategy, reducing computational footprint by 90% while maintaining data completeness across 12 quarters of regulatory filings
